

Case - View the current booking information

- Use case: View the current booking information
- Level: User goal
- Primary actor: Staff who is currently using the system
- Scope: Display the current booking information for the current system user.
- Stakeholders:
 - Staff: Wants to view his current booking records, total number of bookings and the maximum booking count.
- Preconditions:
 - The staff should be an authorized user (logged-in).
- Success Guarantee:
 - The system will provide the total number of bookings of the current staff.
 - The system will list out the current booking records including the booking reference number, the booking date & time, room number and room location for the staff.
- Main Success Scenario:
 1. After the successful authentication and authorization process, the system will display the current user information.
 2. The system will show the total number of bookings of the current staff.
 3. The system will list out the current booking records including the booking reference number, the booking date & time, room number and room location for the staff.
 4. This system will update automatically if the booking record changes (i.e. new booking has been made).
- Extensions:
 1. If the booking record displayed is not incorrect
 - (a) Multiple reasons could cause this to happen. Such as an emergency maintenance occurred in the booked room and other administrative reasons.
 - (b) Technical problems such as IO Errors could also cause the problem.
 - (c) The staff should contact the system administration staff for further enquiry.
