

## Case - Logout of the system

- Use case: Logout of the system
- Level: User goal
- Primary actor: Staff who is currently using the system
- Scope: Allow other staffs to use the system one-by-one, the previous user should logout of the system.
- Stakeholders:
  - Current Active Staff: Specify the room and the time slots
  - Other Waiting Staffs: Waiting for the current user finished the booking and queuing for the system.
- Preconditions:
  - The staff should be an authorized user (logged-in).
- Success Guarantee:
  - The current user will logout and not allow other users to use his/her identity. Next user will be able to login to the system using their own staff id and password.
- Main Success Scenario:
  1. The **current user** close the **current info window**.
  2. The **login window** will appear.
  3. **Other user** login into the **system** using the **login window**.
  4. This process will repeat and other staffs can use the system one-by-one.
- Extensions:
  1. If the **current user** forgot to logout
    - (a) The **current info page** will display the **first name** and **last name** of the **current logged-in user**.
    - (b) The **new user** would know the current system user is not themselves.
    - (c) The **new user** should logout and re-login using their own **staff ID** and **password**.
